MONTHLY WEATHER MAP

FEBRUARY 1961

LIBRARY
APR 25 1961
WEATHER BUREAU

General Summary of Weather Conditions

February 1961 averaged 8 to 12 degrees above normal in southern British Columbia and portions of the southern Prairie Provinces as most of the country reported warmer than normal temperatures. Areas colder than normal were the Atlantic Provinces, the eastern Arctic and the Mackenzie Valley. Precipitation was outstandingly heavy along the Pacific Coast but much below normal in Labrador and Newfoundland.

In the Province of British Columbia February weather was mild and moist. As during the past two months monthly mean temperatures were above normal throughout the province. Throughout the central plateau and the valleys of the southeastern interior of the province mean temperatures for the month were eight to ten degrees above normal. Along the coast there were positive anomalies of two to five degrees while in the northern interior of the province, positive excesses of temperature decreased northward to one or two degrees along the British Columbia-Yukon boundary.

Precipitation for the month averaged about twice normal in all but the extreme northern part of the province. New record precipitation amounts for the month were set at a large number of stations in British Columbia, such as at Vancouver, Abbotsford, Patricia Bay, Estevan Point and Tofino. The latter station reported 33.44 inches but this was not the highest in the province. The honour for this went to Bear Creek where 40.60 inches were experienced during the month. At this station measurable rain was reported on every day of the month and over an inch of rain on eleven different days. The heaviest falls were 6.25 inches on the 28th and 7.75 inches on the 20th.

February weather was also mild in the Prairie Provinces. Mean temperatures for the month were ten to twelve degrees above normal in southern Alberta and southwestern Saskatchewan. These were the highest positive anomalies reported anywhere in Canada for the month. Excesses of eight to ten degrees were reported from south central Saskatchewan and southeastern Manitoba while the remainder of the Prairie Provinces also experienced temperature excesses. The highest temperature reported in Canada during the month was 64°F. recorded at Raymond, Alberta on the 6th when a number of other stations reported maximum temperatures of sixty or higher. The only cold weather came during the third week of the month when daily temperatures were five to ten degrees below normal.

There was little or no precipitation for the first ten days of the month but a flow of Arctic air on the 12th brought general snowfalls starting a trend which brought snow at frequent intervals from then to the end of the month. On the 22nd Calgary reported a record twenty-four hour snowfall for February when 12.5 inches of snow was reported. In Manitoba there was generally twelve to eighteen inches of snow during the last week of the month. Many highways were blocked for a period on the 25th and 26th. Stations in the southern grain areas of all three Prairie Provinces experienced up to three or four times the normal fall, although the distribution was very irregular, and there were stations scattered throughout the area which received only normal precipitation or less.

The first few days of February were cold throughout the Province of Ontario. This was particularly true on the 2nd when all synoptic weather reporting stations recorded below zero temperatures. By the second week of the month, temperatures began a steady climb and remained above normal from then until the end of the month. Mean temperatures were eight to ten degrees above normal in the northwestern districts and three to six degrees above normal throughout the remainder of the province.

Very little precipitation was reported during the first week of the month but enough fell during the milder weather of the last three weeks to swell monthly totals above the normal amount in most of the districts of northern Ontario. Most northern Ontario stations reported excesses ranging to sixty per cent, with a few in the Kapuskasing-Timmins area receiving over twice the normal falls. By contrast there were deficiencies ranging to eighty per cent in the Sudbury-Georgian Bay area and along the shores of Lake Huron. Elsewhere in southern Ontario there were excesses which ranged to forty per cent.

February was a mild month throughout the more settled parts of Quebec in spite of a few very cold days at the beginning of the month. Mean temperatures for the month were four to eight degrees above normal in the upper part of the St. Lawrence River valley and the lower part of the Ottawa River Valley. Other southern districts experienced temperature excesses of one to four degrees, except the Gaspe Peninsula where temperatures were within one degree of normal. In the central interior there were deficiencies of three degrees, while along the shores of Hudson Bay and Hudson Strait temperatures were normal or close to it.

February precipitation was generally light in the province of Quebec except for severe storms on the 18th and again on the 25th and 26th. On the latter occasion freezing rain and gale force winds combined to cause heavy damages to power and communication lines as well as property generally. For the month as a whole precipitation totals ranged from fifty per cent below normal to slightly above normal at a few stations. In the far north and the central portion of the province there were deficiencies of forty to eighty per cent.

February was cold in the Maritime Provinces, particularly the first half of the month. The lowest temperatures were reported on the 2nd when - 39°F. was reported from Riley Brook, N.B. and Stellarton, N.S. The intense cold of the first half of the month was responsible for ice-locked Atlantic Harbours and even Halifax harbour experienced a skim of ice across it on a few mornings. Mean temperatures for the month were near normal in New Brunswick and three degrees below normal in the southern half of Nova Scotia, three to six degrees below normal in Prince Edward Island, Cape Breton Island and the northern half of mainland Nova Scotia.

During most of February storm centres passed either north or south of the Maritime Provinces. However, on the 26th a severe storm crossed the area with wind speeds reaching seventy to eighty miles an hour in gusts over much of the eastern Maritimes on the morning of the 27th. Heavy rains and warm temperatures in the southern Maritimes on the 26th led to local flooding. On this occasion, Truro, N.S. reported 2.26 inches of rain in twenty-four hours and Dartmouth Airport, 2.01 inches of rain, while in northern New Brunswick there were falls of sixteen inches of snow. Moncton and Saint John, N.B. both reported freezing rain accompanying the rain and snow on the 26th. For the month as a whole precipitation totals fluctuated around the normal both excesses and deficiencies ranging to forty per cent being reported.

Precipitation was generally light during February on the Island of Newfoundland, particularly rainfall. At Gander only a trace of rain was reported and this set a new low record for the month. The severe storm which struck the Maritime Provinces on the 26th also affected the island of Newfoundland on the 26th and 27th, Gander Airport reporting over a foot of snow and some freezing rain on the two days. At St. John's the storm brought 1.12 inches of rain out of a total of 1.16 for the whole month. Throughout the Island February precipitation totals were generally below normal, deficiencies ranging from thirty to forty per cent but averaging about twenty per cent for the Island as a whole. Mean temperatures for the month were six to ten degrees below normal.

February was also cold along the Labrador coast with mean temperatures averaging six to eight degrees below normal except at Goose Bay where there was a deficiency of only three degrees. Precipitation was light, the total for the month ranging from forty to eighty per cent below normal.

In the Yukon Territory February mean temperatures were slightly above normal with most stations reporting excesses of about one degree, although at Whitehorse and Teslin there were excesses of four degrees. In the southwest corner of the Yukon there were precipitation deficiencies for the month of about forty per cent but the remainder of the territory experienced excesses of thirty to ninety per cent, except at Teslin where there was over three times the normal fall for the month.

February temperatures were cold in the District of Mackenzie, deficiencies ranging from nine degrees at Aklavik and Normal Wells to two degrees at Fort Simpson. Stations around Great Slave Lake were exceptional with temperature excesses of from three to five degrees. All stations in the District of Keewatin reported mean monthly temperatures about six degrees above normal. On the islands of the Arctic Archipelago, temperatures were cold relative to normal on the eastern side where Clyde experienced an eight degree temperature deficiency. On the western side on the other hand Mound Bay reported a five degree excess.

The distribution of precipitation over the Northwest Territories in February was extremely irregular, with no simple pattern evident. Precipitation was heavy at Yellowknife, Baker Lake, Resolute and Isachsen where excesses ranged from ninety to a hundred and twenty per cent. On the other hand, Frobisher and Clyde experienced deficiencies of eighty per cent and Mould Bay and Fort Reliance fifty per cent. Other stations of the district were somewhere between these extremes.

FEBRUARY 1961
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.

British Columbia
